Subject: CFAC 3 week update

On November 10, 2015 the DEQ received the most recent update from Carl Burnham of IRS Environmental on the quantity of Asbestos material removed from the CFAC site to date. The current cumulative total of 28,340 pounds of regulated asbestos waste remains steady from the last update as no active asbestos project permits exist for the site. The waste disposal receipts for October indicate the removal of an additional 156,220 pounds of non-regulated asbestos material, yielding a "to date" non-regulated asbestos total of 389,000 pounds. Structures previously included in this removal include the West Rectifier, Rod Mill Building, Paste Plant, Quonset Hut, West Aluminum Unloader, and Compressor Building. The most recent removal also accounts for materials in the Transformer reactors, Pet Coke Unloader, and the Potline Complex (including anodes).

Demolition notifications remain in place for the West Rectifier and Rod Mill Buildings and an additional demolition notification was submitted in October for continued work in the Paste Plant. Indications are that this is "selective" demolition in order to facilitate forward progress on access.
